Introduction

GS3 is a business venture between Feblo International LLC and I Thinc. This venture combines intuitive technology design with strategic supply sourcing to create process driven, people centered, environmentally conscious and economically efficient supply chain management solutions.

Supply chain management (SCM) is the systemic, strategic management of raw materials, manufacturing, assembly, kitting, packaging, sequencing, and distribution of merchandise to the customer (B2B) or point of sale (B2C).

GS3 provides the most comprehensive and efficient supply chain management services for mid, large and enterprise level companies. Our clients enjoy the peace of mind that comes with having to deal with one vendor for all of their supply chain management needs.

Whether you need raw or finished goods from manufacturers in low cost countries, such as China, Mexico, Costa Rica and Brazil, or help getting your products through U.S. customs, GS3 will provide you with accurate and cost savings solutions.

Solutions & Services

Technology Management Systems

The GS3 advanced technology incorporates transactional processing capabilities and delivers enterprise-class scalability. Our platform includes a layer of technology services such as XML data, process and user interface modeling, a rules-based programming language, as well as business process management services.

GS3's technology platforms are designed with the next generation of technology in mind—virtual. Taking advantage of internet technologies, we design flexible applications that provide reasonable

return on investment.

Our technology interfaces with existing legacy systems, designed for use with barcode and smartcard technology, RFID, and wireless environments.

Kitting, Assembly, Sequencing

GS3 ensures that the entire assembly process of your components is more efficient. Using our advanced warehouse management system, our clients have the capacity to 1) ensure there is sufficient material on hand to meet order fulfillment requirements, 2) control inventory obsolescence and 3) effectively plan manufacturing, delivery schedules and procurement activities.

All materials are bar coded according to our client's needs and specifications in order to ensure proper packaging, tracking and distribution of products. Whether it is 300 part numbers or 1 million, GS3 always has the necessary trained staff on hand to handle the product assembly, kitting, sequencing and shipping needs of our clients.

Packaging & Redistribution

Every product requires a package. GS3 produces assemblies and delivers virtually every type of custom package containing any combination of printed materials and product. Our finished goods inventory accuracy rate is over 99%. Our clients benefit from our packaging material buying power by reducing overall finished goods costs when they use GS3 as a complete outsourcing partner. Our packaging capabilities include Corrugated, Decorative Carton, Auto Bagging, Foam-in-Place, Cohesive Pouch, Blister Packaging,

Shrink Film, Bundling, Kitting, and Stretch Film.

Along with reducing costs, GS3 also reduces the amount of inventory turns with our state of the art warehouse management systems, which allows us to implement JIT (just in time) inventory solutions. Our services include Inventory Forecasting, Order Processing, Real-time Tracking, JIT Delivery, 24 hour shipping Performance, UPS, FedEx, Air and Common Carrier.

Global Strategic Supply Solutions

GS3 Industry Experience

- ☐ Automotive
- ☐ Transportation
- ☐ Warehouse
- ☐ Healthcare
- ☐ Dental
